

ShockStraps are a unique shock absorbing tie down that is made to keep tension on the strap and your load secure. Made with ratchet and cam straps and an industry leading 2 Year warranty.

When road vibrations cause loads to shift and settle, other tie downs can loosen and become unsafe. Under these conditions, our ShockStrap stretches acting like a shock absorber and contracts with the load keeping it secure. Even in extremely rough road conditions you won't have to pull over to make sure that your tie down is secure.

The strength of our product is in its ability to maintain constant pressure on the strap when hitting bumps or having side pressure applied to it. You won't have to pull over every 50 miles or at a gas station break to retighten ShockStraps.

Don't take our work for it, listen to real customers!
